## A-380

The slim and technically sophisticated solid wood and concrete furniture series named A-380 was developed by designkollektiv in close cooperation with the civil engineer Dr. Benjamin Kromoser (BOKU Vienna). During the design phase, the limits of the material capabilities of solid wood and concrete were explored. Several test procedures crystallized the optimal wing-like shape between minimum cross-section and maximum stability at the same time. The furniture bench spans 1.60 m and further with a side edge of only 10 mm.
